February inflation: 0,47 percent

In February 2002, the Consumer Price Index (CPI) increased 0,47 percent, recording a 2,80 variation in the last 12 months.

In February inflation it was determinant the price increase in foodstuff and fuel. The former was mainly explained by the price increases in potato due to a lower supply; vegetables, related to seasonal factors; poultry, reflecting the lower breeding of baby chicken; and papaya.

The price increases in fuels obeyed to the rises in gasoline and lubricants (3,3 percent), gas (1,9 percent) and kerosene (1,8 percent) made by refineries Petroperu on February 8 and 19 and Relapasa on February 8 and 17, in

response to the higher oil international price (9 percent). These increases explain 0,45 percentage points of February inflation.

On the other hand, among the products that recorded price decrease it should be noted eggs, fresh and frozen fish and grapes, which altogether explain -0,16 percentage points of February inflation.

Excluding high variability components, the core component of inflation, named **core inflation** increased 0,08 percent in February, reflecting the price increases in services (0,18 percent), mainly in education and others. On the other hand, the average prices of goods remained steady.
