Inflation

In March 2003, the Consumer Price Index (CPI) increased 1,12 percent, recording a 1,82 variation in the period January-March and 3,39 percent increase over the last 12 months. The monthly inflation was a result of the increase in transportation (9,4 percent), fuels (4,9 percent) and education (2,3 percent). The latter due to the start of the scholar year.

The increase in transportation fees was explained by the rise in the urban fare (10 percent) and national transportation (5 percent). However, this increase is lower than that in fuel due to the excess supply in this sector.

The oil price increase is directly related to the increase in the international price.

In average, gasoline prices grew 8,7 percent in percent.

On the other hand, the foodstuff prices remained steady. The rises in potato, meat, poultry, egg and tomato were offset by the falls in citric fruits, papaya, apple, grapes, fish and processed foodstuff.

Excluding high variability components, the core component of inflation, named **core inflation** increased 0,08 percent in March (0,09 percent in the period January-March and 1,71 percent in the last 12 months), reflecting the price increases in services (0,4 percent), mainly of education, whereas the average prices of goods fell 0,1 percent.
