International Markets

Average country risk at 154 basis points in May

In May, the average country risk, measured by the **EMBI+ Peru** spread, fell from 182 to 154 basis points, reflecting a similar trend to the one observed in the region (the EMBI+ Latin America fell from 302 to 278 basis points).

The evolution of the EMBI+ Latin America was favored by investors' lower risk aversion and by the investment grade rating (BBB-) assigned to Brazil's debt by Standard & Poor's.

On **June 4**, the **EMBI+ Peru** was 156 basis points.

Average price of copper fell to US\$ 3.79 per pound

In **May**, the average price of copper fell from US\$ 3.94 to US\$ 3.79 per pound (3.8 percent). This fall was associated with an increase of inventories at the London and Shanghai stock markets and with expectations of a lower demand in the United States, but offset by the lower production of copper seen in Chile in the first quarter of 2008.

The price of copper was US\$ 3.63 per pound on **June 4**.

In **May**, the average price of **gold** declined 2.0 percent as the price fell from US\$ 910.5 to US\$ 892.3 per troy ounce, influenced by the strengthening of the dollar against the euro and by a lower demand for jewelry in India and Turkey. However, the price of gold continues to show an upward trend due to the oil price rise to record highs and to expectations of higher inflation in countries like England, China and India. On **June 4**, the price of gold fell to US\$ 881.1 per troy ounce.

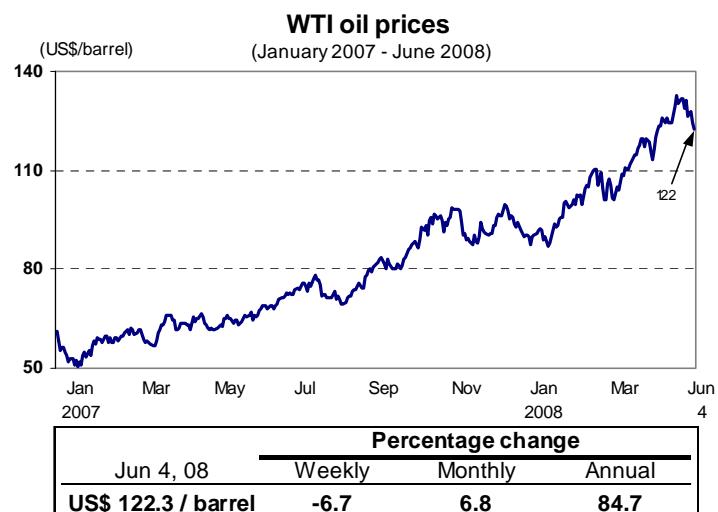

resumen informativo

The average price of **zinc** showed a 4.4 percent reduction in May when the price fell from US\$ 1.03 to US\$ 0.98 per pound. This evolution was influenced by higher inventories at the London Metal Exchange as a result of higher production in Australia and China in a context of a lower demand for zinc in Europe and Japan. However, the fall in the price of zinc was temporarily offset by a lower supply from China due to the impact of the earthquake that affected this country.

The price of zinc price posted US\$ 0.88 per pound on June 4.

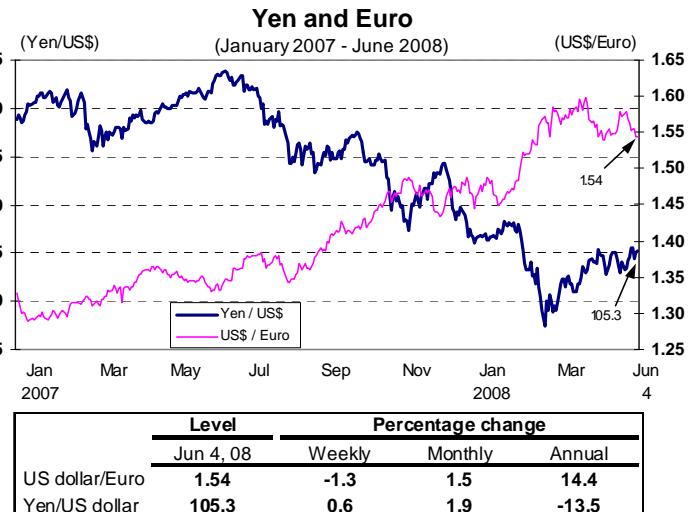

In May, the average price of **WTI oil** rose from US\$ 112.6 to US\$ 126.4 per barrel (12.2 percent) due to lower inventories of gasoline in the US and market expectations of higher oil prices in the future. Moreover, persistent geopolitical tensions and supply reductions in the North Sea and in Nigeria also contributed to move the price of crude upwards.

The price of WTI oil on **June 4** was US\$ 122.3 per barrel.

On average, dollar appreciated against the euro and the yen in May

On average, the **dollar** appreciated 1.2 percent against the **euro** and 1.6 percent against the **yen** in May. The dollar strengthened against the euro influenced by expectations that the FED's cycle of cuts would have concluded, given that economic indicators in the US were better than expected. Moreover, a rise of interest rates in the Eurozone is less likely given that confidence indices in Germany and France were weaker than expected.

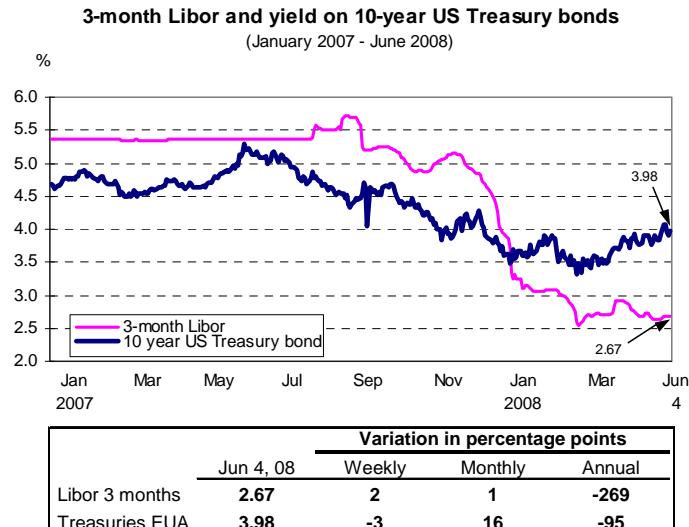

On **June 4**, the exchange rate for these currencies was US\$ 1.54 per euro and 105.3 yens per dollar.

resumen informativo

Yield on 10-year US Treasuries increased 3.88 percent on average

In **May**, on average terms the **3-month Libor** decreased from 2.79 to 2.69 percent, while the yield on the **10-year Treasury bond** increased from 3.65 to 3.88 percent. The increase seen in the case of the Treasury bond was explained by growing expectations that the FED's cycle of cuts would come to a pause and by investors' lower risk aversion given that credit markets were calm after central banks increased their injections of liquidity.

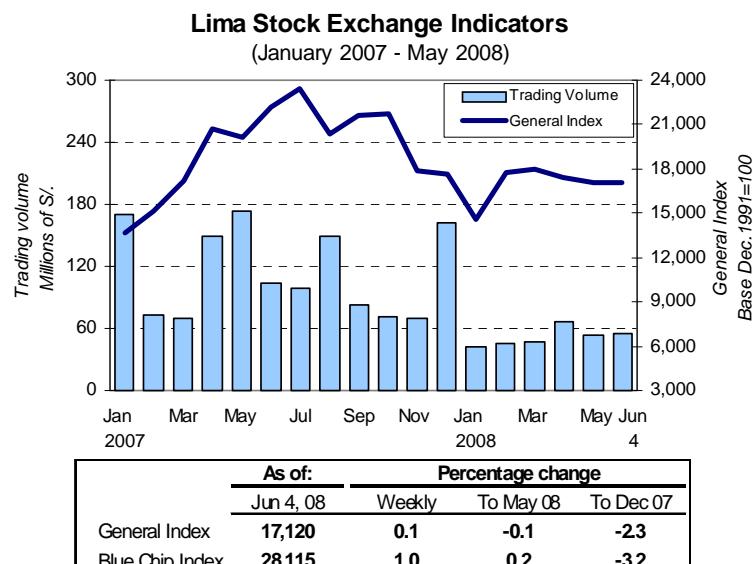

On **June 4**, the **3-month Libor** decreased to 2.67 percent and the yield on the **10-year Treasury bond** increased to 3.98 percent.

Lima Stock Exchange fell 1.6 percent

In **May**, the **General** and **Blue Chip** indices of the Lima Stock Exchange (LSE) fell 1.6 and 4.0 percent respectively, influenced by the lower prices of basic and precious metals that affected mining shares and by investors' lower caution regarding the international context. Another factor influencing this fall was the drop of agricultural shares given the delay seen in the auction of state shares.

So far in **June**, the **General** index has fallen 0.1 percent, while the **Blue Chip** has grown 0.2 percent.

Year-to-date, the **General** and **Blue Chip** indices accumulate losses of 2.3 and 3.2 percent respectively.

***** Desde el 29 de setiembre de 2006, el JP Morgan, de acuerdo a sus criterios de liquidez de mercado, ha incluido dentro de su EMBI+ PERÚ los bonos globales Peru 2025 y 2033. Al ser los spreads de dichos bonos cercanos a los 200 pbs, ello explica el aumento de cerca de 40 pbs en el EMBI+ PERÚ a partir del 29 de setiembre.

a los 200 pbs, ello explica el aumento de cerca de 40 pbs en el EMBI+ PERU a Fuente: BCRP, INEI, Banco de la Nación, BVL, Sunat, SBS, Reuters y Bloomberg.
