Economic surplus of S/. 958 million in September 2008

In September, the operations of the central government recorded an economic surplus of S/. 958 million –a result S/. 290 million higher than the one observed in September 2007– due to higher current revenue (S/. 1,094 million) and to a reduction of interests (S/. 112 million). This was higher than the growth of non-financial expenditure (S/. 915 million).

An economic surplus of S/. 8,619 million was obtained in the January-September period. This result, which is S/. 1,171 million higher than the one recorded in the same period last year, is explained by higher current revenue (S/. 6,546 million), mainly due to value added tax –VAT– (S/. 4,937 million) and income tax (S/. 1,400 million). Net financial expenditure net of transfers to other public entities (S/. 27,953 million) grew 15.1 percent in real terms compared to the same period in 2007.

The central government's current revenue grew by a real 15.8 percent, accumulating a growth rate of 8.4 percent as of September. Tax revenue grew 16.1 percent, a result explained by the growth of value added tax (31.9 percent) and income tax (7.3 percent), which compensated lower revenue from excise tax (38.6 percent) and from import duties (12.1 percent). Non-tax revenue increased 13.8 percent due to higher directly collected resources, royalties and mining royalties.

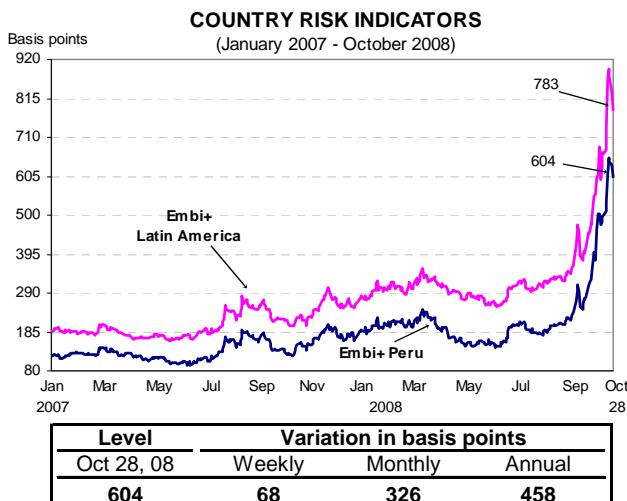

Non-financial expenditure net of transfers to other public entities (S/. 3,516 million) increased 18.3 percent in real terms, with current expenditure (S/. 2,963 million) showing a growth rate of 18.0 percent. By group of expenditure, transfers to the private sector increased 64.9 percent (given that the Ministry of Energy and Mining used S/. 434 million from the Fuel Price Stabilization Fund), while expenditure in goods and services increased 10.6 percent. Moreover, capital expenditure (S/. 553 million) grew 19.5 percent, mainly due to higher spending in gross capital formation (28.3 percent).

Internacional Market

Country risk at 604 basis points

Between October 21 and 28, the country risk indicator, measured by the **EMBI+Peru** spread, increased from 536 to 604 basis points, showing a similar evolution to the one seen in the region (the **EMBI+Latin America** rose 46 basis points).

Increased risk aversion due to fears regarding the global economy and the lower prices of raw materials reflected in widened spreads for the emerging debt.

Price of copper dropped to US\$ 1.87 per pound

In the same period, the price of **copper** dropped 8.0 percent to US\$ 1.87 per pound. On September 27, copper was quoted at US\$ 1.67 per pound the lowest level since September 2005. The price of red metal was subject to downward pressures due to the deepen expectations that the demand for metals would decline given the threat of lower growth, especially in USA, UK, Germany and Japan (there is still uncertainty about the evolution of China's demand).

During the week of analysis, the price of **gold** fell 4.6 percent to US\$ 739.4 per troy ounce, its lowest level in over a year. The reduction in the price of gold was explained by the strengthening of the dollar against the euro, which is affecting the position of precious metals as an investment option. However, higher demand for gold in Asia partially prevented a lower decline in the price of gold.

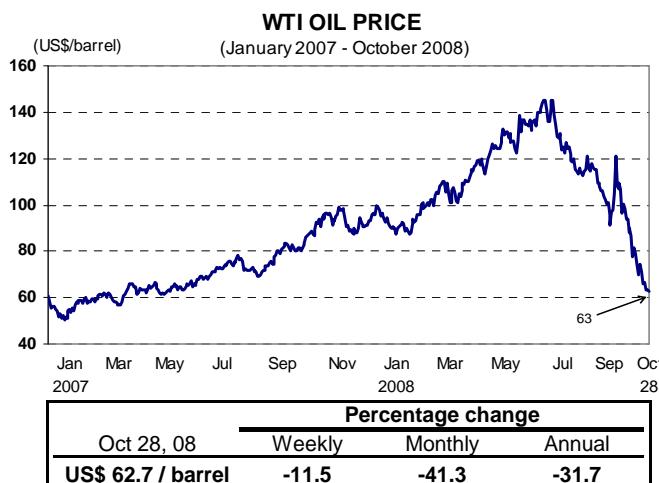

resumen informativo

Between October 21 and 28, the price of **zinc** rose 1.0 percent to US\$ 0.52 per pound. The price of this basic metal showed an increase due to lower inventories at global bourses.

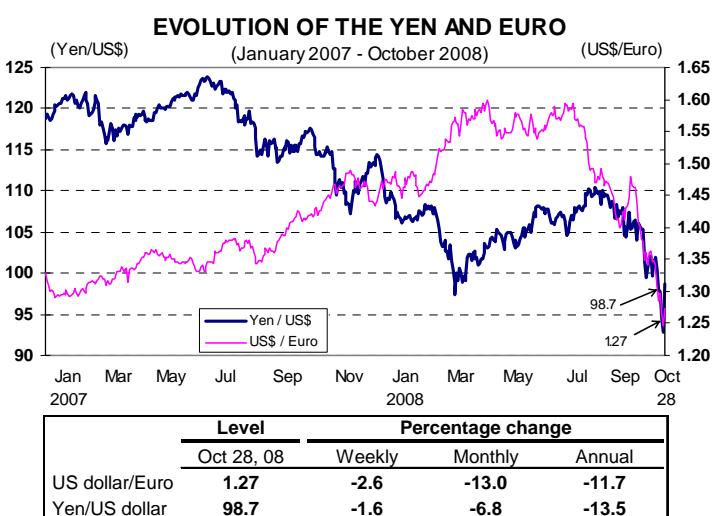

The price of **WTI oil** fell 11.5 percent and reached US\$ 62.7 per barrel between October 21 and 28, posting its lowest level since August 2007. The price of oil dropped as a result of global economic slowdown, which is reflected in higher inventories of crude in USA. Fears that a world economic recession will affect the demand for fuel eclipsed the OPEC's agreement of October 24 to reduce their production quotas (1.5 million barrels per day).

Dollar appreciated against the euro

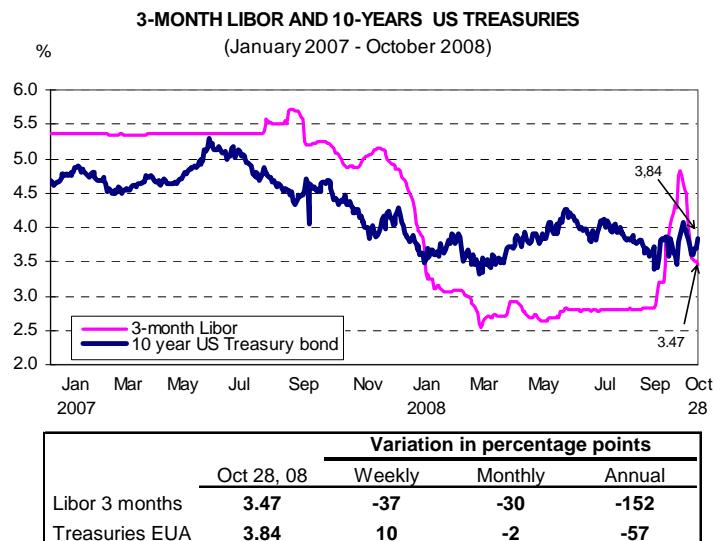

In the same period, the **dollar** appreciated 2.6 percent against the **euro** due to increased signals of a recession in Europe, which has raised expectations of interest rate cuts. The private sector economy in the Eurozone contracted at the fastest pace observed since the monetary union was established and the economy of Great Britain contracted for the first time in 16 years in the third quarter.

The dollar depreciated 1.6 percent against the **yen** due to the resulting risk aversion which generated a reversal in carry trade operations.

Yield on 10-year US Treasuries rose to 3.84 percent

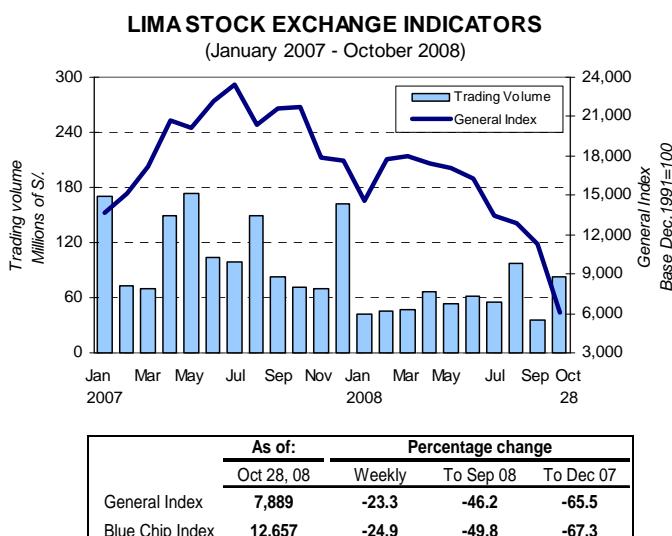

Between October 21 and 28, the **3-month Libor** declined from 3.83 to 3.47 percent, while the yield on the **10-year US Treasury bond** rose from 3.74 to 3.84 percent. The increase in the yield on the Treasury bonds was associated with a slowing of demand for safe assets such as the public debt, after stocks recovered from their sharpest fall in five years, despite constant concerns about the economy and corporate gains.

Lima Stock Exchange has fallen 46.2 percent as of October 28

The **General** and **Blue Chip** indices of the Lima Stock Exchange (LSE) have fallen 46.2 and 49.8 percent respectively as of October 28.

During the week (October 21 to 28), these indices showed losses of 23.3 and 24.9 percent, respectively. The LSE showed a strong fall due to the sharp decline of the prices of basic metals, especially copper, due to increasingly clearer signals of a possible world recession and to the cooling of China's economy.

Year-to-date, these indices have accumulated losses of 65.5 and 67.3 percent, respectively.
