MACROECONOMIC REPORT:

Q1-2012

Current account deficit of 2.1 percent in Q1

In Q1-2012 the current account deficit in the balance of payments amounted to US\$ 982 million (2.1 percent of GDP). The trade surplus amounted to US\$ 2.11 billion due to increased volumes of exports of both traditional and non-traditional products, which offset the lower international prices of the major commodities. This favored the generation of profits in companies with foreign shareholding, which amounted to US\$ 2.99 billion in this quarter. On the other hand, remittances from Peruvians living abroad rose 5.5 percent compared to Q1-2011 and totaled US\$ 669 million.

resumen informativo

The financial account, made up mainly by long-term private sector funding, both foreign direct investment and portfolio investment and long-term loans, amounted to US\$ 6.61 billion. The reinvestment of profits of enterprises with foreign shareholding, particularly mining companies, as well as the capital contributions of parent companies and disbursements of long-term loans to various sectors stand out in terms of long term funding. Short-term capitals, on the other hand, showed a negative flow associated with the acquisition of assets, especially mining companies' deposits abroad.

Surplus of 7.0 percent of GDP recorded by non-financial public sector in Q1

The operations of the non-financial public sector recorded a surplus of 7.0 percent of GDP in Q1-2012. This balance, which is 1.0 percentage point of GDP higher than the one registered in the same quarter in 2011, was due to the increase in the current revenue of the general government (0.4 percentage points of GDP) and to the decline in the non-financial expenditure of the general government (0.3 percentage points of GDP), particularly the investments and purchases of goods and services of the national government.

Domestic investment reached 26.7 percent of GDP in Q1

Domestic savings also grew in Q1-2012 showing a rate 1.1 percentage points higher due to increased public savings as a result of the growth of revenues in this sector. The lower requirements of external savings –down by 0.9 percentage points– associated with these higher domestic savings reduce external vulnerability and make the balance of payments more sustainable.

Dollar appreciated against the euro

In May 15 - 22, the **dollar** appreciated 0.4 percent against the **euro**.

The evolution of the dollar against the euro was influenced by increased risk in financial markets associated with uncertainty regarding Greece's possible exit from the Eurozone and fears that the crisis might spread to other economies in the region (i.e. Spain and Italy).

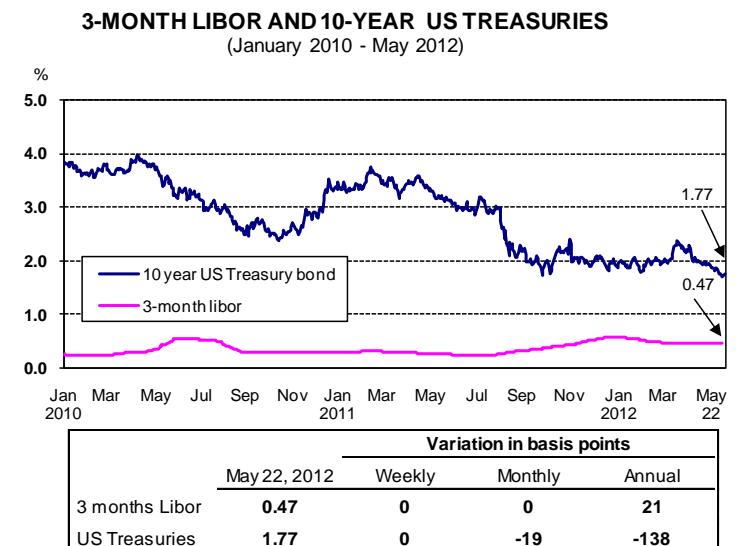

Furthermore, the dollar depreciated 0.3 percent against the **yen**.

Yield on 10-year US Treasuries at 1.77 percent

Between May 15 and 22, the **3-month Libor** and the **yield on the 10 year-US Treasuries** remained at 0.47 and 1.77 percent, respectively.

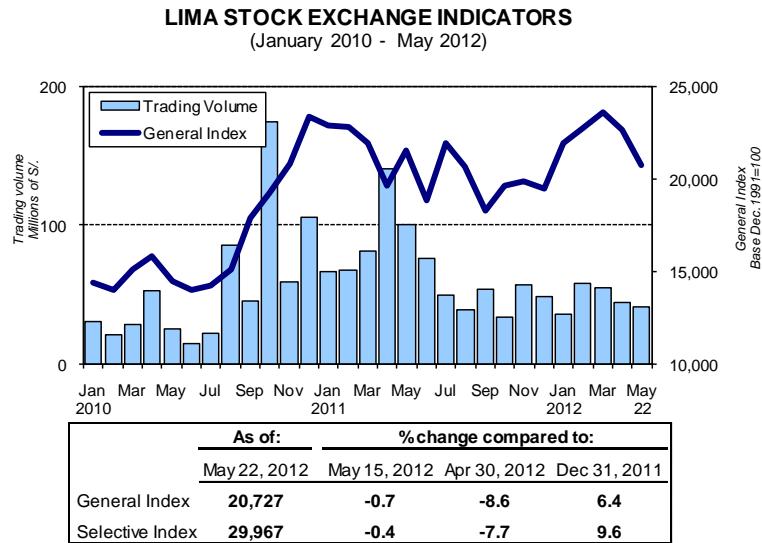

Fears of a crisis in the Eurozone and the G8 and China's announcements that they will continue to support economic growth contributed to offset the evolution of the yield on the US Treasury bonds during the week.

Annual profitability at the LSE registered 6.4 percent

So far this month, at May 22, the **General** and the **Selective Indices** of the Lima Stock Exchange (LSE) have fallen 8.6 and 7.7 percent, respectively.

During the week (May 15 – 22), both indices dropped 0.7 and 0.4 percent, respectively, in line with the negative performance of markets in the region amid fears of Greece's potential exit from the Eurozone and the decline in the price of basic metals.

So far this year, the General and the Selective Indices of the LSE have accumulated gains of 6.4 and 9.6 percent, respectively.
