WEEKLY ECONOMIC REPORT N° 10

OPERATIONS OF THE NON-FINANCIAL PUBLIC SECTOR: FEBRUARY 2016

The non-financial public sector (NFPS) recorded a deficit of S/ 2.16 billion in February 2016. This deficit is explained by the decline of the current revenue of the general government and by the increase of non-financial spending. In the period January–February, the economic balance of the NFPS was S/ 1.87 billion.

The general government's tax revenue dropped 12.8 percent while non-financial spending increased by 16.1 percent as a result of both current and capital components.

INTERNATIONAL MARKETS

Country risk fell to 227 basis points

In March 2-9, the country risk indicator, measured by the **EMBIG Peru** spread, fell from 240 to 227 basis points.

Similarly, the **EMBIG Latin America** spread fell 19 bps in a context of a strong recovery of oil prices and positive job data in the United States.

Country Risk Indicator

International prices of gold, zinc, and crude oil on the rise

In the same period, the price of **gold** rose 0.6 percent to US\$ 1,246.4 per troy ounce.

This rise in the price of gold is explained by the depreciation of the dollar against its main counterpart currencies and by investors' taking positions given expectations that the European Central Bank will announce additional stimulus actions.

In March 2 – 9, the price of **copper** climbed 3.3 percent to US\$ 2.24 per pound.

This rise was supported by the depreciation of the dollar and by the increase of non-commercial positions as a result of the reduction of inventories at the London Metal Exchange to levels close to historical minimum record levels.

In the same period, the price of **zinc** rose 0.1 percent to US\$ 0.82 a pound.

This price rise was associated with expectations of additional stimulus programs in China, but offset by the continued increase of inventories at the Shanghai Stock Exchange.

Copper Price
(cUS\$/pound)

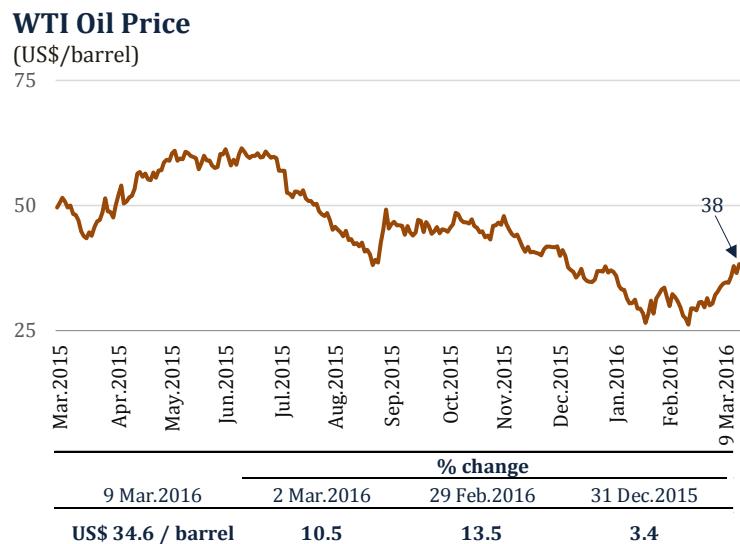

Zinc Price
(cUS\$/pound)

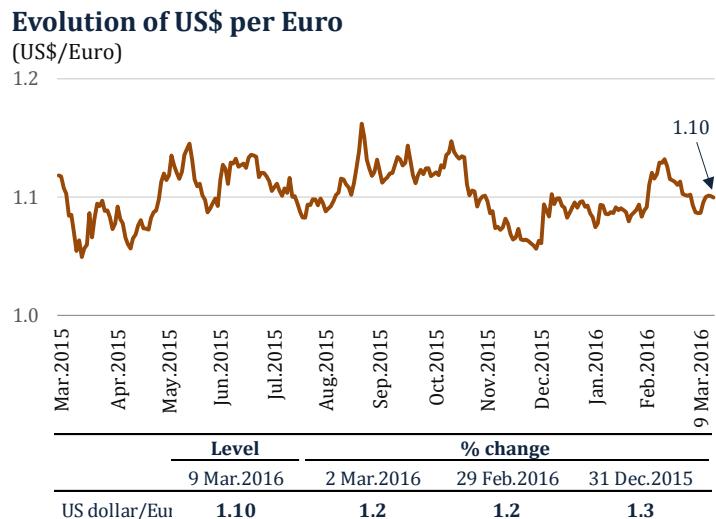

Between March 2 and March 9, the price of **WTI oil** increased 10.5 percent to US\$ 38.3 per barrel.

This price rise was favored by the reduction of operating oil rigs in the United States and by conversations between OPEC member and non-member countries about an oil production freeze.

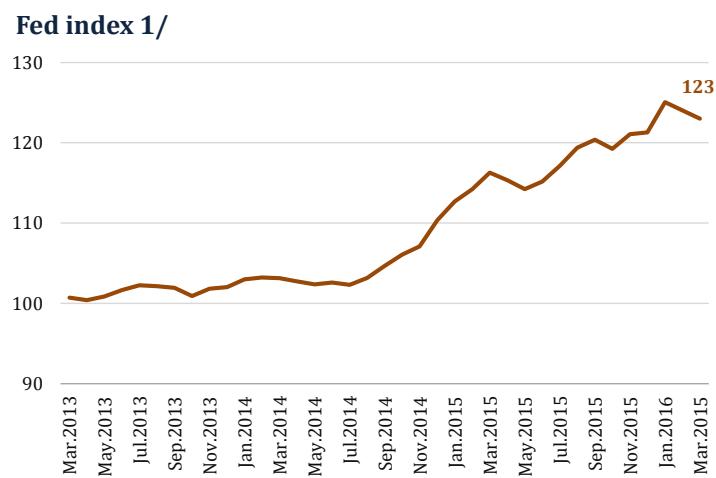

Dollar weakened in international markets

In March 2-9, the **dollar** depreciated 1.2 percent against the **euro** after salaries in the United States recorded a lower-than-expected increase in February, which offset concerns of a rise in the U.S. Federal Reserve interest rate.

The US dollar has been appreciating against most other currencies in recent months, as reflected in the evolution of the **FED index** since January 2013. This appreciation of the dollar is associated with expectations that the Federal Reserve (FED) will start normalizing its interest rates.

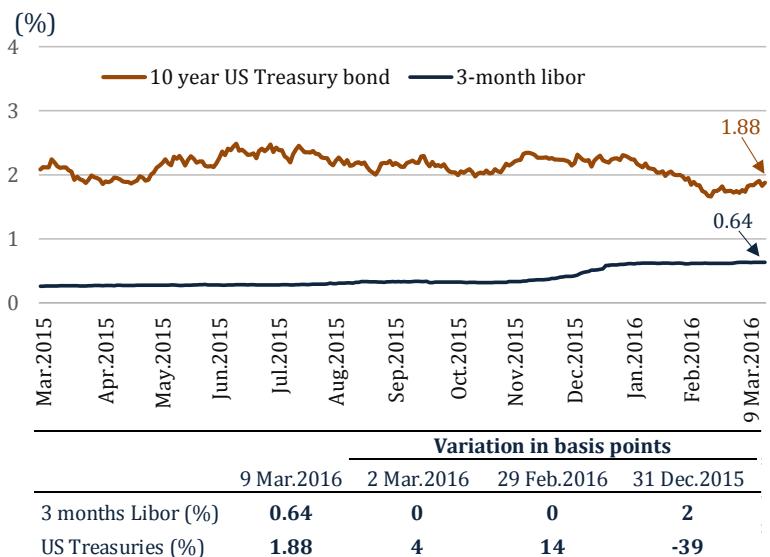

1/ Calculated taking into account currencies of US trading partners weighted by contributions.
A rise in the index represents an appreciation of the US dollar.

The performance of the LSE indices was in line with the good performance of the main stock exchange markets in the region, influenced by the rise of commodity prices.
